

1 **ABSTRACT OF THE DISCLOSURE**

2 A light directing device for a connector includes a translucent tube having a
3 slanted portion and a straight portion. The slanted portion has a perpendicular face
4 adapted to be engaged with a side face of a light emitting diode. A reflection seat is
5 adapted to be securely connected to the connector and having at least one pair of
6 covering plates. Each pair of covering plates defines therebetween a gap for receiving
7 therein the light emitting diode.
